

Comfort Workstation

Ahrend's latest innovation

Take control of your own desk

The new Comfort Workstation is all about personal control over your workplace. This highly innovative desk with an integrated high-tech solution, enables you to work in a more productive and healthy way. Everything in this desk is completely personalisable with sit / stand solutions, biodynamic lighting and climate; all based on a digital ergonomic passport.

Personal climate control, stimulating productivity

With the Ahrend Comfort Workstation it is possible to control the temperature in your own personal work environment. For optimal productivity, the overall indoor temperature should be between 20-25 °C. However, the perception of a pleasant indoor climate differs per person. Recent scientific research shows that people who cannot influence the indoor climate are expected to be 6.3% less productive and have an average of 33% more 'sick building complaints'.

Human Centered Temperature

Heating and cooling elements are integrated in the Comfort Workstation. This includes heated tabletops and acoustic screens with integrated ventilation components. Owners and tenants of buildings can easily save housing costs, because the climate control over their work environment is adjustable on a personal level. Up to 25% reduction of energy for heating, 45% reduction of energy for cooling and 45% reduction of lighting energy.

By using the ergonomic passport, the workplace is automatically adjusted to your personal preferences.

Biodynamic lighting affects health and wellbeing

Biodynamic lighting is integrated into the Comfort Workstation, allowing employees to manage both the level intensity and the colour of the light. Dynamic light is needed to carry out your daily activities and can compensate the possible lack of daylight in the office. Various studies show that good lighting has a large (positive) impact on health, wellbeing, alertness and even on sleep quality.

Interested in a scheme pilot?

Pilot Phase - TKI ImPeKt project

In March 2017, the pilot phase of the project known as TKI ImPeKt project (ImPeKt: Implementation of Personal Climate) started. In this project, Ahrend collaborates with Abel Delft, Trilux, TNO, TU Delft, ING and Sodexo in order to develop and test a prototype for a personal climate-control system. The ImPeKt project will be supported by a 'Top sector' fiscal energy allowance from the Ministry of Economic Affairs. More information can be found on ahrendcom/comfort.

Ahrend. A Cradle to Cradle company
Creating safe products and healthy environments

Ahrend is the most sustainable company in its sector in Europe and has set itself the goal of closing the full production cycle by 2020. Ahrend produces climate-neutral products, using the principles of Cradle to Cradle and Eco-design, with the efficient use and reuse of materials.
